

States' ShortCutz eliminates many of the labor-intensive steps from routine woodworking components, improving your productivity and lowering your costs. Drawer box construction takes one-third the time of scratch built drawers and shelving is even quicker, without compromising quality.

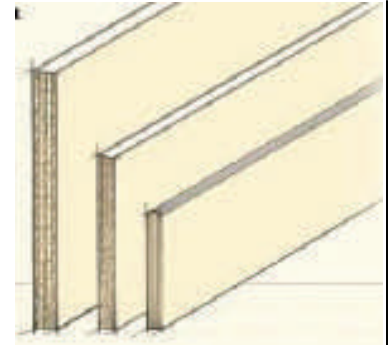

ShortCutz Woodworking Components for Quality and Efficiency.

Ingenuity. It's in everything we do.

ShortCutz components in popular species and widths are edgebanded and finished with NOVA® Ultraviolet Cured coatings, saving significant shop time.

Applications

Pre cut, finished and edgebanded strips in a range of widths and species make quick work of common construction elements including:

- Drawer Boxes
- Shelving
- Closet Standards
- Slab Doors
- Cabinet Carcasses.

Distinctive Constructions

Buying small quantities of components instead of units of panel goods means you can afford to include value – creating options like Aromatic Cedarlined drawer boxes or White Maple closet standards, creating unique and profitable finished products.

Eliminate Finishing Headaches

ShortCutz features States' NOVA® UV cured finishes, allowing you to avoid finishing altogether, or at least focus your finishing labor to critical areas. NOVA® finishes are durable, beautiful and chemically resistant products.

Save Time

ShortCutz eliminates many of the labor intensive steps from routine woodworking components, improving your productivity and lowering your costs. Drawer box construction takes one third the time of scratch built drawers, and shelving is even quicker, with no compromise in quality.
